These numbers are calculated based on the boats position and course combined with the weather forecast.

They are not guaranteed to be 100% correct but rather an approximation of the real data in the server.

The data is updated automatically every 60 seconds and this page reloads automatically.

If a boat is a SYC member, by clicking the name of a boat the other boats data will be showed as differences to that boat. Other boats locations compared to the reference boat will be also showed then (distance and bearing).

The normal listing is returned by clicking the reference boat again.
